TARGET AUDIT SUBJECT

Client: Fabian Ruiz

Business: Client Profile (Pending Verification)

Service Radius: 30-Mile Dynamic Radial Mesh (Greater Sacramento / Placer County)

Scan Date: September 18, 2026 • 03:04 PM PT

SHARE OF LOCAL VOICE (SoLV)

AVG RANK POSITION (ARP)

1.2%

#16.5

1 of 81 Grid Nodes in Google 3-Pack

Across 60x60-mile regional perimeter

DIAGNOSTIC PROXIMITY CLIFF

• 0.0 - 3.5 Miles: Top 3 Positions Captured (High Proximity)

• 3.6 - 8.0 Miles: Rank slides from #4 to #8 (Page 1 drop)

• 8.1 - 30.0 Miles: Proximity blackout (#9 to #20+) – ZERO CALLS

REVENUE IMPACT ANALYSIS (30-MILE EXPANSION)

Avg High-Ticket Job Value: \$8,500 – \$10,500

Estimated Monthly Calls Leaked to Competitors: 18–24 calls/mo

Annual Lost Commercial & Residential Volume: \$153,000+

RECOMMENDED PROTOCOL DEPLOYMENT

1. 6-Node Regional Google My Maps Entity Mesh with KML vectors

2. Geotagged Exif photo injections along 30-mile commercial corridors

3. Category precision & un-strippable PDF companion authority bridges

Full Execution Protocol & Operating Standard:

[https://www.gslocaleseo.com/protocol](#)

The 3-Step Radial Expansion Protocol:

- 1. 6-Node Regional Google My Maps Mesh:** Construct high-authority vector clusters linking central commercial anchors to surrounding trade zones.
- 2. Geotagged Exif Photo Injections:** Feed weekly photo proofs with embedded GPS metadata along major transport corridors to continuously extend the proximity cutoff.
- 3. Companion Authority Whitepapers:** Deploy un-strippable PDF technical bridges to force Googlebot to verify geographical service jurisdiction.
